

I think that future will be better than today because I believe that technology will change the world, we will create many robots for human kind to facilitate our life.

I believe that science and scientists will find many vaccines for many illnesses so to save many lives.

I hope that world will be a best place. I hope that air will be less polluted. We must do separate collection of rubbish with a dustbin for each type of recyclable and non-recyclable waste so to reduce the emission of carbon dioxide in our atmosphere. We should reduce two phenomena that are destroying our planet: the hole in the ozone layer and the greenhouse effect and save the planet. We should also find a way to use less oil and less fossil fuel because these resources will end in a short time. We must do our best.

However, I don't know how the world will really be.
