

Future in my opinion

I think future can become better if we make it better.

In our school we are doing a project called “green school”, that helps and makes us understand how to recycle. I hope that in the future everyone will understand how to make the world not polluted.

I would like to study in the future to help people who have problems because of it.

I hope so, but if we all work hard to do what the “green school” teaches us, the world will get better.
